

Introducing...

REVOLUTIONARY

EV+ BRAKE PADS

STOP! THE FUTURE HAS LANDED!

Special Features

1: New Friction Material

low noise properties and consistent, stable stopping power

2: BRAKEBOOST Instant Friction

provides instant friction during the bedding-in process

3: Scorching

unique process which improves friction stability, particularly at high temperatures, and contributes further to the ultra-low noise properties of the pads

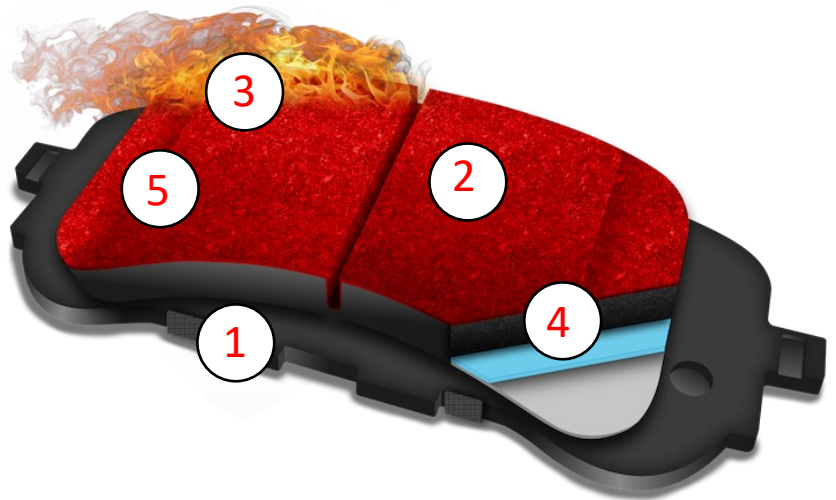

4: Shim Clips

to help reduce vibration and eliminate unwanted noise

5: OE Matching Chamfers

developed to control how the pad edge contacts with the brake disc.

This ensures effective contact between pad and disc to reduce unwanted noise during use

**ULTRA - LOW NOISE
FASTER & HEAVIER**

This exclusive new range covers models such as the KIA NIRO, Nissan Leaf, Renault Zoe and Tesla Model 3.
